Overview

Kuyash Place: A Culinary Haven, nestled in the heart of Abuja at Apo Resettlement, Kuyash Place beckons with its vibrant atmosphere and delectable offerings. Our cozy yet contemporary space is a haven for food lovers, where each dish tells a story of passion and creativity. From tantalizing appetizers to indulgent mains and heavenly desserts, every bite is a journey of flavor. Whether you're seeking a casual dining experience or a memorable celebration, Kuyash Place invites you to savor the moment and indulge in culinary delights that ignite the senses.
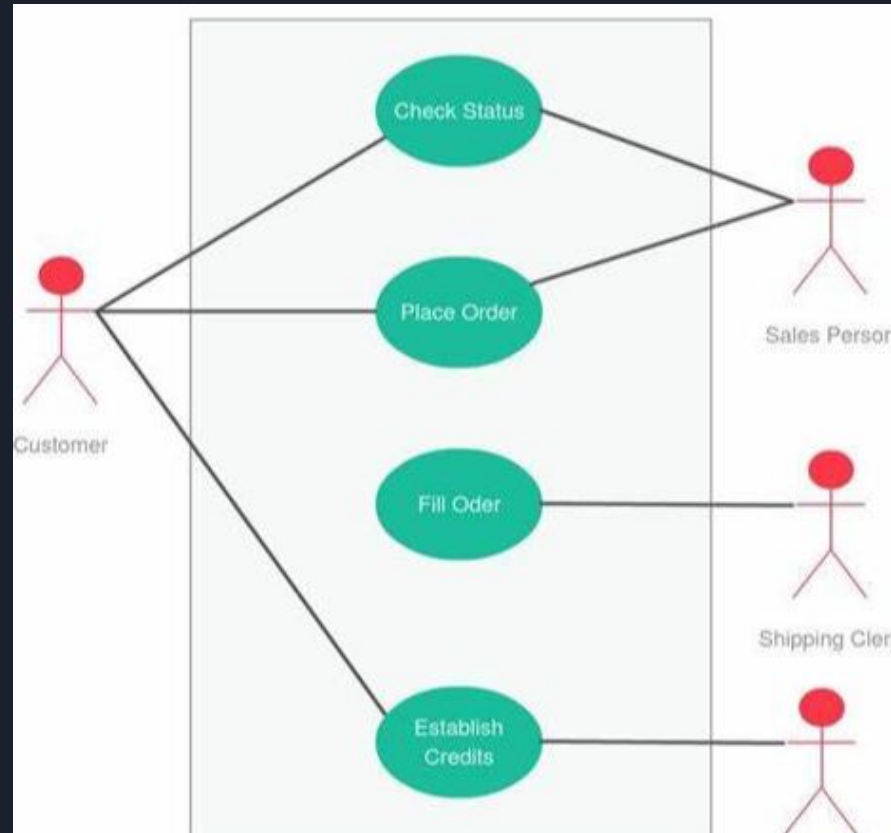

Story of the project

I work with a catering service who also now owns a restaurant, we are faced with looking for programmers and developers who will build Point of sales and webpages. I said to myself why not do the website? Why not make you boss be proud of you Sarah, and i suddenly realized i am also required to develop a portfolio project, why not use a single stone to catch two birds. And that was how i took it upon myself to research what they need and what i need to start and complete this project. Thank you.
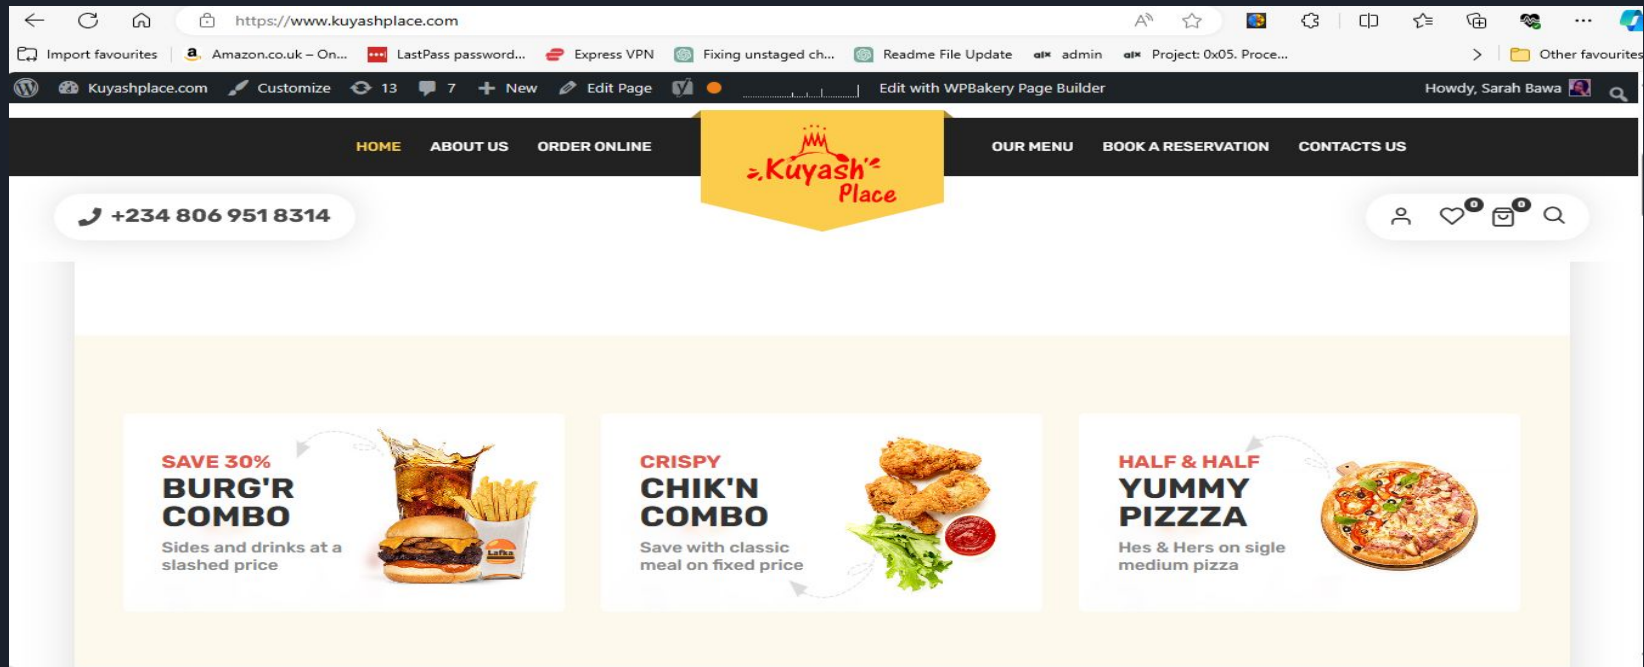

WPD Project objectives

1. Facilitate customer referrals to our webpage.

2. Incorporate new recipes and products seamlessly.

3. Enable online order placement and processing.

4. Implement secure online payment options.

5. Boost visibility and public awareness.

6. ALX-webstack- Portfolio Project - Google Slides

Web Use Case

Technology & Architecture

Web Framework: Wordpress

Technology & Architecture

Web Framework: Wordpress

Challenge(s) overcome

Theme Customization: Ensuring consistent design and functionality across various themes or within a single theme can pose a challenge in WordPress front-end development.

Performance Optimization: Optimizing code, minimizing HTTP requests, and managing plugins to maintain fast page loading times is a key challenge for front-end developers working with WordPress.

Cross-Browser Compatibility: Ensuring that the website displays and functions correctly across different web browsers and devices requires careful attention and testing in WordPress front-end development.

Learnings about technical interests as a result of this project

This project gave me a lot of insight while working on this website. For this project i spent most of the time by cleaning, preparing and loading products, it can be tedious but its a core part of web cleaning.

Thank you!
